

Westside Pediatrics Vaccine Policy

At Westside Pediatrics, we follow the immunization schedule recommended by the American Academy of Pediatrics (AAP). Vaccines are one of the most effective tools available to protect children and communities from serious, preventable diseases. By adhering to the AAP guidelines, we ensure that every child receives care that reflects the safest and most current medical recommendations supported by scientific evidence.

We believe that following the recommended vaccination schedule is essential not only for the health of each individual child, but also for the well-being of our community. Vaccination helps prevent the spread of illness and protects those who are most vulnerable, including infants, elderly individuals, and people with weakened immune systems.

Your child's safety and long-term health are our highest priorities, and our vaccination policy reflects this commitment. We are dedicated to these evidence-based standards and are unable to accommodate families who choose not to follow the recommended immunization schedule.
